Cool... That's why they're out there, to hopefully help in multiple scenarios. A better OSM map for the county helps everyone.

Thanks for the quick response and confirmation. Yes, the plan is to use one of your web services as a background on top of OSM data to edit features.

Is your use case simply bringing up one of our web services of aerials and dropping them behind OSM to improve the features? If so, then that's a perfectly valid use case. If you need a physical copy of the aerials that would require a bit more forethought and work.

Hi,

I am a volunteer of [OpenStreetMap](#), a collaborative open project to create a global geodata set freely usable by anyone on share-alike and attribution terms under the [Open Database License \(ODbL\)](#).

We're very interested in using Arapahoe County's aerial imagery to improve the map. Contributors to OpenStreetMap will only be using this imagery to trace features such as roads and buildings. In order to facilitate this, we want to confirm with you whether or not this imagery is considered to be in the public domain or if OpenStreetMap contributors could have explicit permission to use this imagery.

Thank you for your consideration. If you have any questions or would like more information about OpenStreetMap, please do not hesitate to contact me by e-mail.
